DEFINING RACE AND ETHNICITY

Racial and ethnic definitions are not static constructs based in science or biology. In fact, the way racial and ethnic groups have been defined and measured in the U.S. has changed dramatically over time and continues to evolve, along with the country's changing demographics. For the purposes of this report, the terminology deployed is that which is reported by the primary data collection sources, meaning that group definitions are not comparable between individual indicators. It is also important to recognize that racial and ethnic groupings may mask significant intragroup differences. While the indicators selected are important measures of success, data selection was constrained by the availability of datasets large enough to reliably breakout by race and ethnicity. In other words, these data do not capture all of the numerous dynamics that contribute to a child's success.
