In partnership with DNREC, our Flood Ready Communities course reviews the multiple sources of flood risks to Delaware communities that can be addressed and mitigated. The course covers basic risk and hazard concepts, FEMA mapping, the Delaware flood insurance program, tools and strategies to prevent these hazards in a cost-effective manner, and recommended strategies for reducing exposure. Examples will include:

- New Castle County's recent mitigation efforts
- A new best practices report for coastal Sussex County communities
- DNREC's statewide flood planning tool

This session qualifies for certificate credit in the Academy for Excellence in Local Government Leadership, and the Delaware Planning Education Program.
