The long term trends show an increasing need for more focused planning and management of aging populations within Delaware, and this training is intended to highlight some of those strategies and resources for local governments. This 1.5-hour training session will provide an overview of:

- Identifying trends related to aging both within Delaware and nationwide
- Examples of challenges and solutions related to aging in communities in Delaware
- Planning and land use strategies that can be considered to help address issues related to aging in your community
- Expertise on what community leaders should know about the issues those aging in place in their community are facing, particularly during COVID-19

Contact Sean O'Neill (oneill@udel.edu) with questions about this event.
